

Self-Study Editor — New Display Features

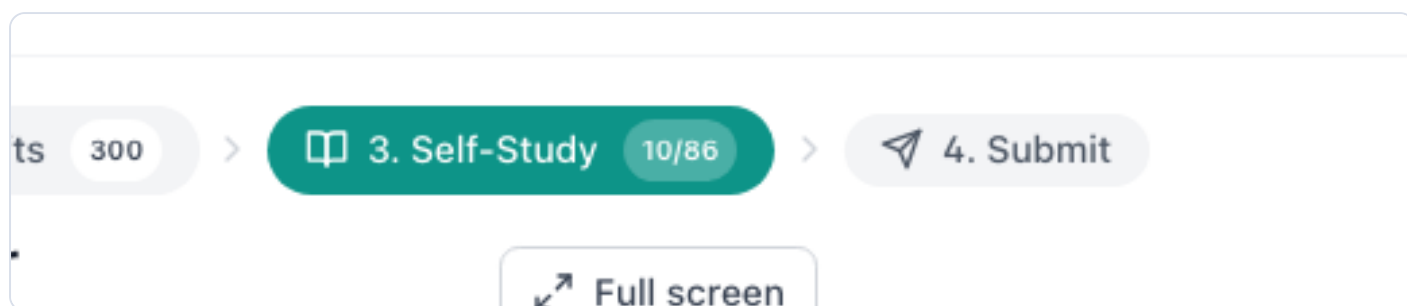

A quick guide to the two new controls that give you more room on smaller screens · Self-Study Portal

Two new controls were added to the top of the Self-Study Editor to make it easier to work on a laptop or a smaller screen:

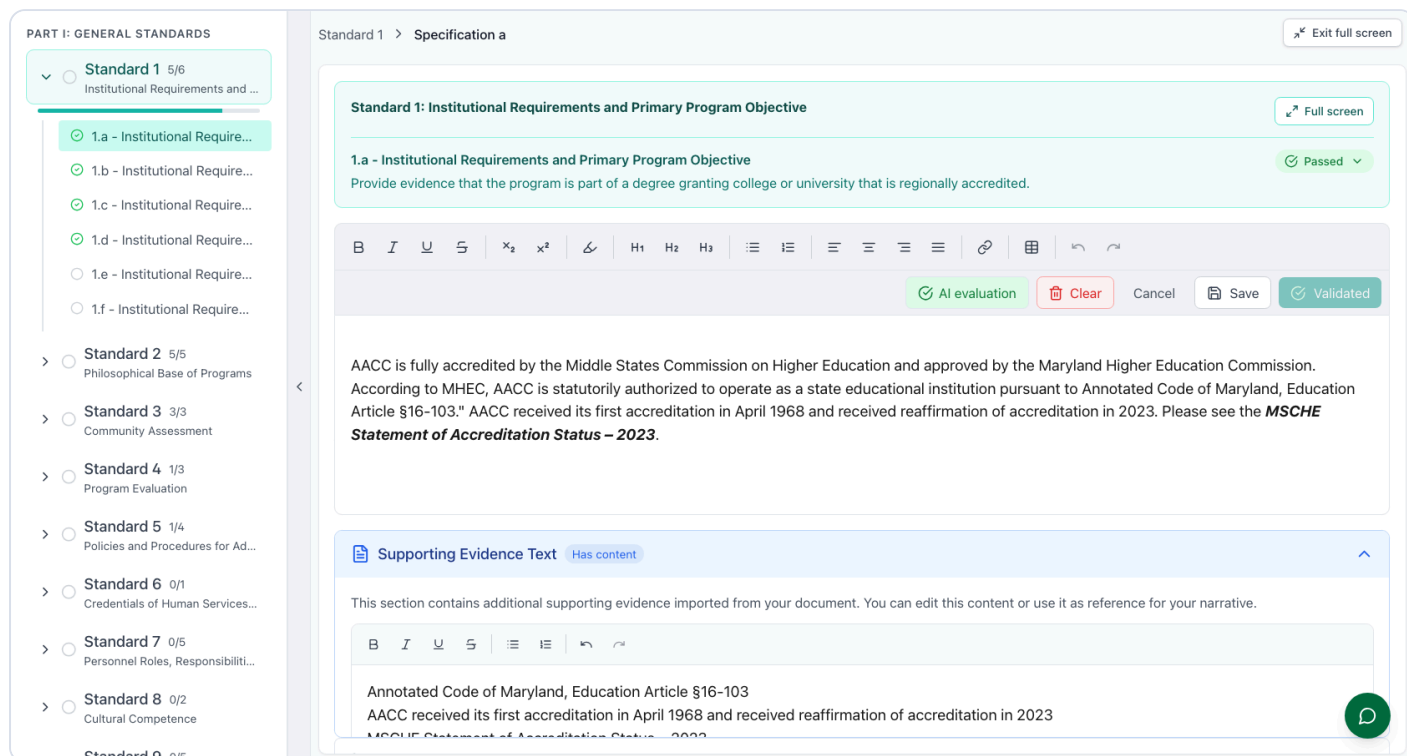

1. **Full screen** — hides the menus and gives your working area the whole window.
2. **Menu** (☰) — on smaller screens the toolbar buttons tuck into a single tidy menu.

1 Full screen — expand your workspace

When you want the most room to read and edit, click **Full screen** in the top bar. The wizard steps, title, and toolbar disappear and your work area (the standards list on the left and the editor on the right) fills the entire window.

The **Full screen** button, next to the “Self-Study Editor” title.

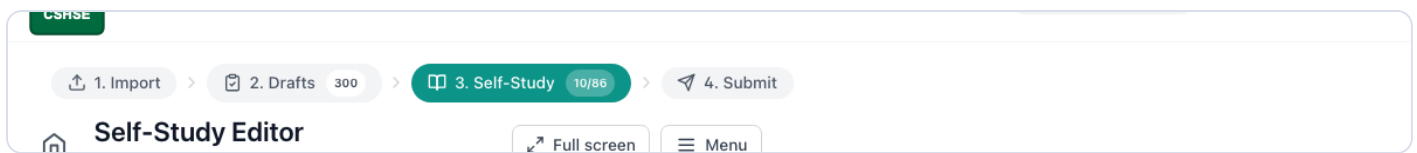

Full screen on — the whole window is your workspace. Click **Exit full screen** (top-right) or press **Esc** to return.

Tip: press **Esc** at any time to leave full screen and bring the menus back.

2 Menu — the toolbar on smaller screens

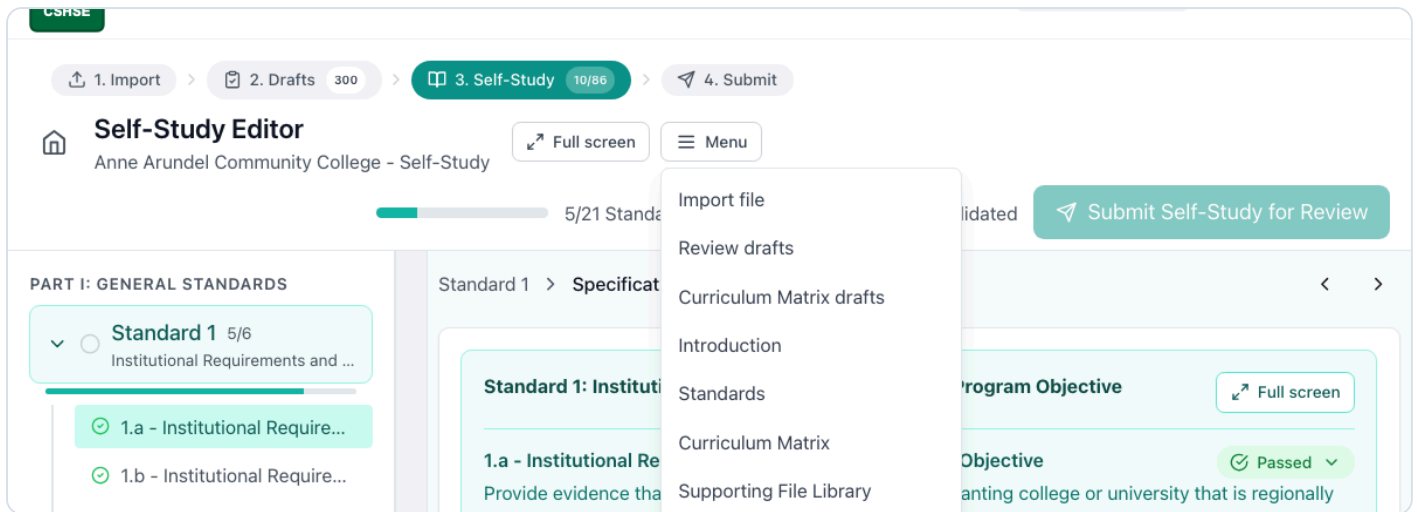

On a maximized laptop or a smaller window, the row of buttons (Introduction, Standards, Curriculum Matrix, Supporting File Library, and the draft tools) collapses into a single **Menu** button so the top bar stays short and nothing

is cut off.

On a smaller screen the buttons collapse — look for **Menu** (the ☰ icon) next to **Full screen**.

Click **Menu** to open the list, then choose where you want to go:

The Menu opens the same choices — Introduction, Standards, Curriculum Matrix, Supporting File Library, and your draft tools.

On a large monitor the full button row shows as before — the Menu only appears when the window is narrow.

Also new: an **AI evaluation** button now sits with the editor's Save/Validate controls on each specification, so you can open the AI review for that spec at any time.
